14. Date/Time Submitted: 09/07/2022 1809 PDT		15. Primary Location, Organization, or Agency Sent To: CA-BDF									
16. State: CA	17. County / Parish / Borough: San Bernardino	18. City: Big Bear / Seven Oaks									
19. Unit or Other:	20. Incident Jurisdiction: CA-BDF	21. Incident Location Ownership (if different than jurisdiction): CA-BDF									
22. Latitude/Longitude: Latitude: 34° 11' 5" Longitude: 116° 55' 5"	23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:	24. Legal Description: Principal Meridian: Township: Range: Section: 1/4 Sec: of 1/4 Sec:									
25. Short Location or Area Description (list all affected areas or a reference point): Santa Anna River Drainage, Snow Summit Ski Resort, Big Bear City			26. UTM Coordinates: Zone: Easting: Northing:								
27. Note any geospatial data available (indicate data format, content, and collection time information and labels): https://ftp.wildfire.gov/public/incident_specific_data/calif_s/!2022_Incidents/CA-BDF-012958_Radford/											
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents): Active											

Incident Status Summary (ICS-209)

Incident: **RADFORD**

**Uphill Runs
Group Torching
Short-range Spotting**

Narrative:
The fire continues to spread as a mostly surface fire with group torching and rollout producing spot fires that are driving the majority of the spread.

Branch I Divs. E, M & S: Fire behavior is dominated by surface fire with group torching in the afternoon causing short range spotting to the north and west. These short uphill runs are causing spread over the 'rim' toward Big Bear where the fuel profile offers less resistance to control.

Branch V - Div. A & Z: Existing control lines will continue to be challenged by spotting caused by group torching and rollout, especially toward the west. Westward progression continues into steep terrain with heavy fuels where there is no significant fire history.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

**Timber (Litter and Understory)
Chaparral (6 feet)
Brush (2 feet)**

Narrative:
Fuels in the area are Timber and mixed brush with no significant fire history. There is significant heavy ground fuels due to lack of fire history and beetle kill from the early 2000s. Most fuel indices are considered at average levels for this time of year but those indices are slowly climbing due to the persistent high pressure system producing record heat in the area.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

Five large organizational Camps (Camp Radford, Camp Wasewagon, Camp Alandale, Camp Arbolado, and Camp Riverglen) all with numerous buildings and associated infrastructure are threatened by the fire. An additional 12 organizational camps are south of the 39 and have a delayed threat. Large number of recreational residence tracts continue to be threatened by the fire. Areas of high density housing including single family dwellings and condominiums surround the ski areas with a high likelihood of impacts from the fire.

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed
E. Single Residences	302	0	0
F. Multiple Residences	10	0	0

<p>33. Life, Safety, and Health Status/Threat Remarks: Smoke will continue to affect the health of firefighters and the public. Air quality in Big Bear City remained very unhealthy. The air quality monitor near Big Bear City measured the AQI near 300. The fires continue to threaten Hwy 38, a major east west transportation route. Long drive times combined with steep dirt roads and smoke inversions could delay emergency transport or evacuation. Road closures exist around the burn area limiting access.</p>	<p>34. Life, Safety, and Health Threat Management:</p> <table border="1" style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: center;">Active?</th> </tr> </thead> <tbody> <tr><td>A. <p>35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern): A persistent high pressure system has been the dominant weather factor in the area for the last week, bringing record high temperatures, low relative humidity, and light easterly winds. These conditions will persist through Thursday, then strong east winds are predicted for Friday, along with the possibility of thunderstorms for the area. This is expected to be followed by general rain generated by Tropical Cyclone Kay Saturday and Sunday.</p>																																					

36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:	
12 hours:	Fire behavior will moderate overnight with continued surface spread but minimal torching and spotting. Unsecured line and spots will continue to spread slowly.
24 hours:	The fire will continue to grow towards the west with short range spotting causing north with a continued threat to the Big Bear area. Flanking and backing fire will slowly continue to the east and south with rollout and short-range spotting.
48 hours:	Predicted strong East winds will push fire to the west into the Hamilton Creek drainage

Incident Status Summary (ICS-209)

Incident: **RADFORD**

	<p>allowing for more uphill runs toward the Big Bear area. Further spread to the south and east with move toward the Seven Oaks area. Forecasted east winds could reach 50mph over the incident.</p>
72 hours:	<p>Predicted widespread rainfall should moderate fire behavior and mitigate spread into critical areas.</p>
Anticipated after 72 hours:	<p>There will be a possibility of general wetting rains with passage of KAY. Since there will be a lot of clouds, heating should be subdued on Friday and Saturday, and much of the rain could be more stratiform and showery, instead of the typical thunderstorms we see during the Monsoon. Given the E-SE wind flow, the best chance for orographic rain accumulations will be in the mountains, and on the desert slopes. Estimating amounts will be of more value in another day or so as we build confidence on the track and timing of Kay. By Sunday, we should see more sun, but moisture levels will remain excessive, so if we get some heating, thunderstorms with intense downpours will become a flash flood threat, focused near the mountains, but they could also occur at lower elevations. Kay is forecast to quickly weaken to a remnant low southwest of Diego as subtropical moisture continues to spread over the region into early next week, maintaining a threat for scattered showers and thunderstorms.</p>
<p>37. Strategic Objectives (define planned end-state for incident):</p> <p>Keep the fire north of State Route 38 to prevent the fire from spreading into the San Gorgonio Wilderness and recreation facilities.</p> <p>Keep the fire south of Forest System Road 2N10(E) to protect Big Bear Lake and Big Bear City.</p> <p>Keep the fire east of Clarks Grade to protect the Bear Creek watershed and Snow Valley ski resort.</p> <p>Keep the fire west of Forest System Road 2N93 and State Route 38 to protect the Santa Ana River watershed and the communities of Erwin Ranch, Lake Williams, Burns Canyon, and Rim Rock.</p> <p>Safety for firefighters and the public through hazard recognition and application of the risk management process. Protect property, both public and private, including the following areas: Communities of Big Bear, Big Bear Lake, Baldwin Lake, Moonridge, Sugarloaf, and Boulder Bay. California Spotted Owl PACs, cultural resources, Wilderness Areas, Class 1 airsheds and heritage resources. Mitigate the spread of Covid-19 using best practices precautions. Integrate with cooperating agencies. This is a full suppression incident and the incident will use roads, ridges, and fuels treatment areas as holding opportunities to keep the fires as small as possible.</p>	
<p>38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:</p>	
12 hours:	<p>Evacuation orders are in place for a small segment of the Big Bear Community including Pine Knot south to Skyline Road, and Knickerbocker west to Castle Rock. Overall impacts will be to the community of Big Bear and the Hwy 38 corridor. Fire Directly impact Snow Summit and Bear Mountain ski resorts and the related infrastructure, damage to these facilities could dramatically impact the local economy. Fire will continue to burn downslope and threaten communities along the shores of Big Bear Lake. Numerous organizational camps along the Santa Anna river drainage. Recreational residences and scattered communities are also threatened.</p>
24 hours:	<p>Possibility of additional evacuations with fire growth to the North of Snow Summit.</p>
48 hours:	<p>Adverse winds could impact the fire during the next 48hrs. There is the potential for strong dry east winds up to 50mph to surface over the fire area which could push the fire west into more difficult terrain and further threaten communities along the Lake and infrastructure. This activity could cause additional evacuations.</p>

Incident Status Summary (ICS-209)

Incident: **RADFORD**

72 hours: Chance for strong winds with wetting rains. There could be impacts to travel routes from the heavy localized rain.												
Anticipated after 72 hours: Fire area should see cooler drier conditions after the weekend.												
39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:												
12 hours: 6- Type 1 Crews, 7- Type 2IA Crews, 4- Type 2 Crews, 10- Type 1 engines, 2- Type 1 ST, 3- Type 3 engines, 5- Type 3 ST, 9- Watertenders, 10- Dozers, 4- Excavators, 3- Graders												
24 hours:												
48 hours:												
72 hours:												
Anticipated after 72 hours:												
40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to: <ol style="list-style-type: none"> 1) critical resource needs identified above, 2) the Incident Action Plan and management objectives and targets, 3) anticipated results. <p>Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.</p> <p>Local technical specialists will assess cultural resource sites if possible, prior to engagement, and in the planning process to identify categories of archaeological sites, and recommend appropriate level of protection. Fire managers will consult with archaeological resources advisors assigned to the incident to minimize direct and indirect impacts. Numerous threatened and endangered plants as well as designated Critical Habitat occur from Bear Mountain east to Sugarloaf Mountain. Additional areas of Critical Habitat occur in meadow habitat west of the fire. Protect property, improvements, and infrastructure on the private lands adjacent to the forest. Incident overhead will strive to develop and maintain relationships with the cooperators and stakeholders while working toward the continued improvement of those relationships. The Sugarloaf Inventoried Roadless Area is east of the fire at Staircase Canyon continuing east along the ridge of Bear Mountain and Sugarloaf Mountain. Creation of dozer lines is not authorized within the IRA without appropriate approvals.</p>												
41. Planned Actions for Next Operational Period: <p>Resources will continue to go direct on the fire and look for areas to hold the fire from progressing towards populated areas. Crews and engines on the ground will continue to be supported by aircraft. Additional crews and engines will continue to strengthen control lines and mop up secured line.</p>												
42. Projected Final Incident Size/Area (use unit label – e.g., "Acres", "Square Miles"): 5,000												
43. Anticipated Incident Containment or Completion Date: 09/30/2022												
44. Projected Significant Resource Demobilization Start Date: 09/14/2022												
45. Estimated Incident Costs to Date: \$3,000,000.00												
46. Projected Final Incident Cost Estimate: \$10,000,000.00												
47. Remarks (or continuation of any blocks above – list block number in notation): <p>CIIMT11 assumed management of the incident today. Incident is in Unified Command with San Bernardino County fire, San Bernardino County Sheriffs, San Bernardino National Forest and Big Bear Fire Department. ICP for the incident will be moving from Yucaipa Regional Park to Snow Summit to allow for better access and firefighter safety.</p>												
49. Resources (summarize resources by category, kind, and/or type; show # of resources on top 1/2 of box, show # of personnel associated with resource on bottom 1/2 of box):												
48.	Agency or Org	CR1	CR2IA	HEL2	ENG3	ENG6	DOZR	ASM	FWAT	WTDT	50.	51.
