

## Incident Status Summary (ICS-209)

Incident: **RADFORD**

1. Incident Name: <b>RADFORD</b>		2. Incident Number: <b>CA-BDF-012958</b>	
3. Report Version (check one box):  Initial <input checked="" type="checkbox"/> Update Final	4. Incident Commander(s) & Agency or Organization: <b>Chris Fogle-FS IC Scott Tuttle-SBC Fire Mike Maltby-Big Bear Fire Tim Nichols-SBC SO</b>	5. Incident Management Organization: <b>Type 2 Team</b>  <input checked="" type="checkbox"/> Unified Command	6. Incident Start Date/Time: Date: <b>09/05/2022</b> Time: <b>1330 PDT</b>
7. Current Incident Size or Area Involved (use unit label – e.g., "Acres", "Square Miles"): <b>1088 Acres</b>	8a. Percent (%) Contained or Completed: <b>59 %</b>	9. Incident Type: <b>Wildfire</b> B. Incident Description: C. Cause: <b>Undetermined</b> D. Fire Suppression Strategy:	10. Incident Complexity Level: <input checked="" type="checkbox"/> Single Complex  <b>CIIMT11 (Fogle)</b>
	8b. Total Percentage (%) of Perimeter that will be Contained or Completed: <b>100 %</b>		
12. Prepared By: Print Name: <b>Chris Brenzel</b>  Date/Time Prepared: <b>09/08/2022 2300 PDT</b>		13. Approved By: Print Name: <b>James Courtright</b>  Signature: _____	
14. Date/Time Submitted: <b>09/09/2022 0605 PDT</b>		15. Primary Location, Organization, or Agency Sent To: <b>CA-FICC</b>	
16. State: <b>CA</b>	17. County / Parish / Borough: <b>San Bernardino</b>	18. City: <b>Big Bear / Seven Oaks</b>	
19. Unit or Other:	20. Incident Jurisdiction: <b>CA-BDF</b>	21. Incident Location Ownership (if different than jurisdiction): <b>CA-BDF</b>	
22. Latitude/Longitude: Latitude: <b>34° 11' 5"</b> Longitude: <b>116° 55' 5"</b>	23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:	24. Legal Description: Principal Meridian: Township:    Range:    Section: 1/4 Sec: of 1/4 Sec:	
25. Short Location or Area Description (list all affected areas or a reference point): <b>Santa Anna River Drainage, Snow Summit Ski Resort, Big Bear City</b>			26. UTM Coordinates: Zone:    Easting: Northing:
27. Note any geospatial data available (indicate data format, content, and collection time information and labels): <b><a href="https://ftp.wildfire.gov/public/incident_specific_data/calif_s/!2022_Incidents/CA-BDF-012958_Radford/">https://ftp.wildfire.gov/public/incident_specific_data/calif_s/!2022_Incidents/CA-BDF-012958_Radford/</a></b>			
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents):			

## Incident Status Summary (ICS-209)

Incident: **RADFORD**

**Moderate  
Backing  
Creeping  
Smoldering**

Narrative:

**Overnight fire behavior was moderate with mostly low intensity ground fire.**

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

**Timber (Litter and Understory)  
Chaparral (6 feet)  
Brush (2 feet)**

Narrative:

**Fuels in the area are Timber and mixed brush with no significant fire history. There is significant heavy ground fuels due to lack of fire history and beetle kill from the early 2000s. Most fuel indices are considered at average levels for this time of year but those indices are slowly climbing due to the persistent high pressure system producing record heat in the area.**

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

**Although the threat has been greatly reduced due to favorable weather and hard work by the crews, the above listed structures will remain threatened until forecasted rain falls over the fire area.**

**Five large organizational Camps (Camp Radford, Camp Wasewagon, Camp Alandale, Camp Arbolado, and Camp Riverglen) all with numerous buildings and associated infrastructure are threatened by the fire. An additional 12 organizational camps are south of the 39 and have a delayed threat. Large number of recreational residence tracts continue to be threatened by the fire. Areas of high density housing including single family dwellings and condominiums surround the ski areas with a high likelihood of impacts from the fire.**

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed
E. Single Residences	<b>302</b>	<b>0</b>	<b>0</b>
F. Multiple Residences	<b>10</b>	<b>0</b>	<b>0</b>

<p>33. Life, Safety, and Health Status/Threat Remarks:  <b>Favorable weather conditions have helped to mitigate some of the hazards. There will continue to be a threat until the area receives the forecasted rainfall within the next 24-48 hours. Road closures exist around the burn area limiting access. Threat for severe weather impacting the area first with east winds gusting to 50mph could dramatically increase threats to life safety and property. These winds will be followed by heavy localized rainfall that could cause flooding, road damage, and life safety.</b></p> <p>35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern):  <b>Kay has weakened to a tropical storm and will continue to weaken as it tracks off the Baja coast before turning west off of northern Baja by Friday night. While Kay stays to the southwest of SoCal, impacts will be felt. Tonight is the calm before the storm. On Friday morning, east winds will be on the increase and by Friday afternoon strong east winds will impact SoCal, strongest over San Diego County with mountain top/slope winds at least to 80 mph gusts and east wind gusts of 50-60 mph for the coast and valleys. Rain will start from south to north Friday morning through the afternoon. Fire danger will be present before rain onset and any wildfires would be fast spreading due to the strong east winds. Rainfall by afternoon will then mitigate the fire weather threat as we turn to flash flooding potential in heavier rain bands which looks to focus over the deserts and mountains, especially east facing slopes.</b></p>	<p>34. Life, Safety, and Health Threat Management:</p> <table border="1" style="width: 100%;"> <thead> <tr> <th></th> <th style="text-align: center;">Active?</th> </tr> </thead> <tbody> <tr><td>A. 36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:	
12 hours:	<b>Fire activity should be moderate with continued backing and flanking. The fire area will be impacted by strong east/southeast winds before the arrival of rain bands. This adverse wind could cause major fire spread to the west and northwest this spread would threaten structures, Hwy 330 and communities along Big Bear Lake.</b>
24 hours:	<b>Predicted strong easterly winds will impact the fire area and have the potential to bring to life remaining areas of heat in the timbered areas of the fire. Any flare-ups could cause spread to the west, especially from the northwest corner of the fire.</b>
48 hours:	<b>Fire activity is expected to be minimal due to predicted precipitation in the area.</b>

## Incident Status Summary (ICS-209)

Incident: **RADFORD**

72 hours:	<b>Fire activity is expected to be minimal due to predicted precipitation in the area.</b>
Anticipated after 72 hours:	<b>By Sunday, we should see more sun, but moisture levels will remain excessive, so if we get some heating, thunderstorms with intense downpours will become a flash flood threat, focused near the mountains, but they could also occur at lower elevations. Kay is forecast to quickly weaken to a remnant low southwest of Diego as subtropical moisture continues to spread over the region into early next week, maintaining a threat for scattered showers and thunderstorms.</b>

37. Strategic Objectives (define planned end-state for incident):	<p><b>Keep the fire north of State Route 38 to prevent the fire from spreading into the San Geronio Wilderness and recreation facilities.</b></p> <p><b>Keep the fire south of Forest System Road 2N10(E) to protect Big Bear Lake and Big Bear City.</b></p> <p><b>Keep the fire east of Clarks Grade to protect the Bear Creek watershed and Snow Valley ski resort.</b></p> <p><b>Keep the fire west of Forest System Road 2N93 and State Route 38 to protect the Santa Ana River watershed and the communities of Erwin Ranch, Lake Williams, Burns Canyon, and Rim Rock.</b></p> <p><b>Safety for firefighters and the public through hazard recognition and application of the risk management process. Protect property, both public and private, including the following areas: Communities of Big Bear, Big Bear Lake, Baldwin Lake, Moonridge, Sugarloaf, and Boulder Bay. California Spotted Owl PACs, cultural resources, Wilderness Areas, Class 1 airsheds and heritage resources. Mitigate the spread of Covid-19 using best practices precautions. Integrate with cooperating agencies. This is a full suppression incident and the incident will use roads, ridges, and fuels treatment areas as holding opportunities to keep the fires as small as possible.</b></p>
---	---

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:	
12 hours:	<b>Evacuation orders have been downgraded to warnings, warnings are in place for segments of the Big Bear Community and surrounding areas due to the incoming inclement weather concerns. Overall impact to the Big Bear Community and HWY 38 Corridor. Moderated Fire growth due to favorable weather conditions. Expect to increase the containment percentage. There still remains the threat that high winds could surface over the fire area before rains reach the area. These strong east winds could cause containment issues along the North and West flanks of the fire.</b>
24 hours:	<b>Incoming Inclement weather may adversely impact the fire containment lines. Maintain fire containment and seek out additional opportunities to ensure fire line containment. Possibility of additional evacuation orders if strong winds continue to impact the fire without rain.</b>
48 hours:	<b>Weather Concerns, wind, rain, flooding. Managing and Maintaining fire line containment. Assisting with flood control and containment.</b>
72 hours:	<b>Possibility of lingering rain showers.</b>
Anticipated after 72 hours:	<b>Fire area should see cooler conditions after the weekend with lingering chance of thunderstorms and scattered rain.</b>

39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:	
12 hours:	<b>None. Unless the fire responds to the east/southeast winds that precedes any moisture. This will be a critical time before a drastic shift in weather.</b>
24 hours:	
48 hours:	
72 hours:	

## Incident Status Summary (ICS-209)

Incident: **RADFORD**

Anticipated after 72 hours:															
<p>40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:</p> <ol style="list-style-type: none"> <li>1) critical resource needs identified above,</li> <li>2) the Incident Action Plan and management objectives and targets,</li> <li>3) anticipated results.</li> </ol> <p>Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.</p> <p><b>Overall strategy will be to continue with direct line where possible and continue to limit the overall fire footprint. Resource orders are commensurate with direct and indirect containment methods.</b></p> <p><b>Anticipation of diminishing fire effects, however weather conditions may adversely affect the overall foreground containment strategies. Steep rugged terrain, High temperatures, with weather forecasts showing the probability of rain and wind which will affect the operational strategies. Avoidance and other sensitive areas impact the ability to utilize closest attack methods. Local technical specialists will assess cultural resource sites if possible, prior to engagement, and in the planning process to identify categories of archaeological sites, and recommend appropriate level of protection. Fire managers will consult with archaeological resources advisors assigned to the incident to minimize direct and indirect impacts. Numerous threatened and endangered plants as well as designated Critical Habitat occur from Bear Mountain east to Sugarloaf Mountain. Additional areas of Critical Habitat occur in meadow habitat west of the fire. Protect property, improvements, and infrastructure on the private lands adjacent to the forest. Incident overhead will strive to develop and maintain relationships with the cooperators and stakeholders while working toward the continued improvement of those relationships. The Sugarloaf Inventoried Roadless Area is east of the fire at Staircase Canyon continuing east along the ridge of Bear Mountain and Sugarloaf Mountain. Creation of dozer lines is not authorized within the IRA without appropriate approvals.</b></p>															
<p>41. Planned Actions for Next Operational Period:</p> <p><b>Resources will continue to go direct on the fire taking advantage of the favorable weather conditions. Crews and engines on the ground will continue to be supported by aircraft as needed. Additional crews and engines will continue to strengthen control lines and mop up to further secure control lines. Due to weather concerns crews will implement severe weather contingencies.</b></p>															
42. Projected Final Incident Size/Area (use unit label – e.g., "Acres", "Square Miles"): <b>1,200</b>															
43. Anticipated Incident Containment or Completion Date: <b>09/30/2022</b>															
44. Projected Significant Resource Demobilization Start Date: <b>09/10/2022</b>															
45. Estimated Incident Costs to Date: <b>\$3,900,000.00</b>															
46. Projected Final Incident Cost Estimate: <b>\$10,000,000.00</b>															
<p>47. Remarks (or continuation of any blocks above – list block number in notation):</p> <p><b>Incident is in Unified Command with San Bernardino County fire, San Bernardino County Sheriffs, San Bernardino National Forest and Big Bear Fire Department. ICP for the incident is operational at Bear Mountain Ski area to allow for better access and firefighter safety due to shorter drive times and better logistical support.</b></p>															
49. Resources (summarize resources by category, kind, and/or type; show # of resources on top 1/2 of box, show # of personnel associated with resource on bottom 1/2 of box):
