14. Date/Time Submitted: 09/09/2022 1748 PDT		15. Primary Location, Organization, or Agency Sent To: CA-FICC									
16. State: CA	17. County / Parish / Borough: San Bernardino	18. City: Big Bear / Seven Oaks									
19. Unit or Other:	20. Incident Jurisdiction: CA-BDF	21. Incident Location Ownership (if different than jurisdiction): CA-BDF									
22. Latitude/Longitude: Latitude: 34° 11' 5" Longitude: 116° 55' 5"	23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:	24. Legal Description: Principal Meridian: Township: Range: Section: 1/4 Sec: of 1/4 Sec:									
25. Short Location or Area Description (list all affected areas or a reference point): Santa Anna River Drainage, Snow Summit Ski Resort, Big Bear City			26. UTM Coordinates: Zone: Easting: Northing:								
27. Note any geospatial data available (indicate data format, content, and collection time information and labels): https://ftp.wildfire.gov/public/incident_specific_data/calif_s/!2022_Incidents/CA-BDF-012958_Radford/											
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents):											

Incident Status Summary (ICS-209)

Incident: **RADFORD**

**Minimal
Backing
Creeping
Smoldering**

Narrative:

The fire activity has been reduced due to rain showers over the fire area.

Branch I Divs. E: There continues to be a concentration of heat in heavy dead and down fuels in the northwest corner of this division that has potential to spread under strong winds. Divs. M & S have experienced a marked reduction in activity.

Branch V - Div. A & Z: These divisions have a higher Oak and brush component therefore there is less residual heat in this area. Very little activity has been seen in these divisions.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

**Timber (Litter and Understory)
Chaparral (6 feet)
Brush (2 feet)**

Narrative:

Fuels in the area are Timber and mixed brush with no significant fire history. There is significant heavy ground fuels due to lack of fire history and beetle kill from the early 2000s. Most fuel indices are considered at average levels for this time of year but those indices are slowly climbing due to the persistent high pressure system producing record heat in the area.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):

Although the threat has been greatly reduced due to favorable weather and hard work by the crews, the above listed structures will remain threatened until forecasted rain falls over the fire area.

Five large organizational Camps (Camp Radford, Camp Wasewagon, Camp Alandale, Camp Arbolado, and Camp Riverglen) all with numerous buildings and associated infrastructure are threatened by the fire. An additional 12 organizational camps are south of the 39 and have a delayed threat. Large number of recreational residence tracts continue to be threatened by the fire. Areas of high density housing including single family dwellings and condominiums surround the ski areas with a high likelihood of impacts from the fire.

A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed

<p>33. Life, Safety, and Health Status/Threat Remarks: Wet weather continues to mitigate threats from the fire but cause additional risks for driving and falling trees.</p> <p>35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern): Tropical Storm Kay will continue to weaken and pull away from Baja tonight and Saturday, but will spin bands of scattered showers and thunderstorms over the region thru the weekend. Cooler temperatures will prevail over the fire Saturday along with gusty E/SE winds. Recent showers and higher humidity will allow for good overnight RH recovery. Bands of heavier showers or thunderstorms that may form over the fire may produce localized flash flooding and debris flows over the recently burned soils. Expect temperatures on Saturday in the low to mid 60s.</p>	<p>34. Life, Safety, and Health Threat Management:</p> <table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 90%;"></th> <th style="width: 10%;">Active?</th> </tr> </thead> <tbody> <tr><td>A. 36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:	
12 hours:	Fire activity will be minimal and limited to smoldering and creeping. The fire area will receive additional bands of rain and wind.
24 hours:	Wet weather will continue to limit fire spread, activity and escalation. Heavy fuels will continue to burn out within the interior of the fire. No spread is anticipated.

Incident Status Summary (ICS-209)

Incident: **RADFORD**

48 hours:	Fire activity is expected to be minimal due to predicted precipitation in the area as well as cooler temperatures and cloud cover.
72 hours:	Wet cooler weather should help to limit any spread or incident escalation.
Anticipated after 72 hours:	By Sunday, we should see more sun, but moisture levels will remain excessive, so if we get some heating, thunderstorms with intense downpours will become a flash flood threat, focused near the mountains, but they could also occur at lower elevations.
37. Strategic Objectives (define planned end-state for incident):	
Keep the fire north of State Route 38 to prevent the fire from spreading into the San Gorgonio Wilderness and recreation facilities.	
Keep the fire south of San Bernardino National Forest Boundary to protect Big Bear Lake and Big Bear City.	
Keep the fire east of Clarks Grade to protect the Bear Creek watershed and Snow Valley ski resort.	
Keep the fire west of Forest System Road 2N93 and State Route 38 to protect the Santa Ana River watershed and the communities of Erwin Ranch, Lake Williams, Burns Canyon, and Rim Rock.	
Safety for firefighters and the public through hazard recognition and application of the risk management process. Protect property, both public and private, including the following areas: Communities of Big Bear, Big Bear Lake, Baldwin Lake, Moonridge, Sugarloaf, and Boulder Bay. California Spotted Owl PACs, cultural resources, Wilderness Areas, Class 1 airsheds and heritage resources. Mitigate the spread of Covid-19 using best practices precautions. Integrate with cooperating agencies. This is a full suppression incident and the incident will use roads, ridges, and fuels treatment areas as holding opportunities to keep the fires as small as possible.	
38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:	
12 hours:	Moderated Fire growth due to favorable weather conditions. Expect to increase the containment percentage.
	Incoming Inclement weather may adversely impact the fire containment lines.
24 hours:	Maintain fire containment and seek out additional opportunities to ensure fire line containment.
48 hours:	Weather Concerns, wind, rain, flooding. Managing and Maintaining fire line containment.
72 hours:	Possibility of lingering rain showers and much cooler temperatures.
Anticipated after 72 hours:	Area should see cooler conditions after the weekend with lingering chance of thunderstorms and scattered rain.
39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:	
12 hours:	None. Unless there is a change in fire conditions.
24 hours:	
48 hours:	
72 hours:	
Anticipated after 72 hours:	
40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:	
1) critical resource needs identified above,	
2) the Incident Action Plan and management objectives and targets,	
3) anticipated results.	
Explain major problems and concerns such as operational challenges, incident management problems, and social,	

Incident Status Summary (ICS-209)

Incident: **RADFORD**

political, economic, or environmental concerns or impacts.
Overall strategy will be to continue with direct line where possible and continue to limit the overall fire footprint. Resource orders are commensurate with direct and indirect containment methods. Anticipation of diminishing fire effects, however weather conditions may adversely affect the overall foreground containment strategies. Steep rugged terrain. Local technical specialists will assess cultural resource sites if possible, prior to engagement, and in the planning process to identify categories of archaeological sites, and recommend appropriate level of protection. Fire managers will consult with archaeological resources advisors assigned to the incident to minimize direct and indirect impacts. Numerous threatened and endangered plants as well as designated Critical Habitat occur from Bear Mountain east to Sugarloaf Mountain. Additional areas of Critical Habitat occur in meadow habitat west of the fire. Protect property, improvements, and infrastructure on the private lands adjacent to the forest. Incident overhead will strive to develop and maintain relationships with the cooperators and stakeholders while working toward the continued improvement of those relationships. The Sugarloaf Inventoried Roadless Area is east of the fire at Staircase Canyon continuing east along the ridge of Bear Mountain and Sugarloaf Mountain. Creation of dozer lines is not authorized within the IRA without appropriate approvals.

41. Planned Actions for Next Operational Period:
Resources will continue to go direct on the fire taking advantage of the favorable weather conditions. Additional crews and engines will continue to strengthen control lines and mop up to further secure control lines. Due to weather concerns crews will implement severe weather contingencies if needed.

42. Projected Final Incident Size/Area (use unit label – e.g., "Acres", "Square Miles"): **1,200**

43. Anticipated Incident Containment or Completion Date: **09/30/2022**

44. Projected Significant Resource Demobilization Start Date: **09/10/2022**

45. Estimated Incident Costs to Date: **\$5,500,000.00**

46. Projected Final Incident Cost Estimate: **\$10,000,000.00**

47. Remarks (or continuation of any blocks above – list block number in notation):
Incident is in Unified Command with San Bernardino County fire, San Bernardino County Sheriffs, San Bernardino National Forest and Big Bear Fire Department. ICP for the incident is operational at Bear Mountain Ski area to allow for better access and firefighter safety due to shorter drive times and better logistical support.

49. Resources (summarize resources by category, kind, and/or type; show # of resources on top 1/2 of box, show # of personnel associated with resource on bottom 1/2 of box):
