11. Report Time Period: From Date/Time: 10/14/2021 1800 PDT To Date/Time: 10/15/2021 1600 PDT			
12. Prepared By: Print Name: Chris Brenzel Date/Time Prepared: 10/15/2021 1600 PDT		13. Approved By: Print Name: Jeff Wills LOFR Signature: 	
14. Date/Time Submitted: 10/15/2021 1643 PDT		15. Primary Location, Organization, or Agency Sent To: CA-RICC	
16. State: CA	17. County / Parish / Borough: Trinity	18. City: Del Loma, CA	
19. Unit or Other:	20. Incident Jurisdiction: CA-SHF	21. Incident Location Ownership (if different than jurisdiction):	
22. Latitude/Longitude: Latitude: 40° 45' 8" Longitude: 123° 20' 12"		23. US National Grid Reference: Grid Zone: x-Coordinate: y-Coordinate:	24. Legal Description: Principal Meridian: Humboldt Township: 4N Range: 7E Section: 1 1/4 Sec: of 1/4 Sec:
25. Short Location or Area Description (list all affected areas or a reference point): Del Loma, CA near Monument Peak			26. UTM Coordinates: Zone: Easting: Northing:
27. Note any geospatial data available (indicate data format, content, and collection time information and labels): https://ftp.wildfire.gov/public/incident_specific_data/calif_n/!2021_FEDERAL_Incidents/CA-SHF-001187_Monument/GIS/			
28. Observed Fire Behavior or Significant Events for the Time Period Reported (describe fire behavior using accepted terminology. For non-fire incidents, describe significant events related to the materials or other causal agents): Minimal Smoldering Narrative: 			

Incident Status Summary (ICS-209)

Incident: **MONUMENT**

Fire behavior continue to diminish with the short days and freezing overnight temperatures. Fire behavior is almost entirely confined to single trees, stump holes and slash piles. No fire growth is expected and any new start in the fire area would burn at a moderate rate of spread with average intensity.

29. Primary Fuel Model, Materials, or Hazards Involved (hazardous chemicals, fuel types, infectious agents, radiation, etc):

**Timber (Grass and Understory)
Timber (Litter and Understory)
Brush (2 feet)**

Narrative:

The primary carrier of fire at lower elevations is grass and shrub mix. In the mid to upper elevation the fuels are heavy forest litter with shrubs and small trees. There are pockets of heavy dead and down. Fuels are fully cured and available for ignition.

30. Damage Assessment Information (summarize damage and/or restriction of use or availability to residential or commercial property, natural resources, critical infrastructure and key resources, etc):	A. Structural Summary	B. # Threatened (up to 72 hrs)	C. # Damaged	D. # Destroyed
	E. Single Residences	0	3	20
	F. Multiple Residences	0	0	0
	G. Mixed Commercial / Residential	0	0	0
	H. Nonresidential Commercial Property	0	0	1
	I. Other Minor Structures	0	0	31

31. Public Status Summary: <i>C. Indicate the Number of <u>Civilians (Public)</u> Below:</i>				32. Responder Status Summary: <i>C. Indicate the Number of <u>Responders</u> Below:</i>

35. Weather Concerns (synopsis of current and predicted weather; discuss related factors that may cause concern): Observed: High pressure maintained a warm and dry air mass across the fire area Friday, resulting in sunny skies and light, terrain driven		Active?
	A. No Likely Threat	X
	B. Potential Future Threat	

Incident Status Summary (ICS-209)

Incident: **MONUMENT**

<p>winds. Temperatures warmed into the 70s from the valley bottoms through mid-slope, with upper 60s observed over the higher slopes and ridgelines. Afternoon humidity values were in the 15-25% range. Forecast: This high will bring one more day of warm and dry conditions across the fire Saturday. High temperatures in the 70s can be expected across much of the fire area Saturday afternoon, with low 80s along the lower elevations. Humidity will again fall into the 15-25% range. Winds will continue to remain light and terrain driven across lower and mid slopes, with south winds of 4 to 8 mph with gusts around 12 mph along upper slopes and ridgelines. This high will move east Sunday, as a cold front pushes through the area late Sunday afternoon through Sunday evening. A band of rain will accompany this front, along with cooler temperatures and higher humidity. Light snow will be possible above 5000 feet later Sunday evening before precipitation ends Sunday night.</p>	<table border="1" style="width: 100%; border-collapse: collapse;"> <thead> <tr> <th style="width: 90%;"></th> <th style="width: 10%; text-align: center;">Active?</th> </tr> </thead> <tbody> <tr><td>C. <p>36. Projected Incident Activity, Potential, Movement, Escalation, or Spread and influencing factors during the next operational period and in 12-, 24-, 48-, and 72-hour time frames:</p>	
12 hours:	<p>Minimal fire activity expected with some pockets of increased activity. Smoldering in deep duff and heavy fuels continues. Interior pockets continue to hold heat. Potential for roll out remains as trees burnout. No expected increase in the fire perimeter. Mostly clear, with a low around 48. West northwest wind around 5 mph becoming calm.</p>
24 hours:	<p>Smoldering in areas of deep duff, stumps, dead and down will continue. The potential for reburn in areas of heavy needle drop will continue. Start of a warming and drying trend for the rest of the week.</p> <p>Sunny, with a high near 72. South southwest wind 3 to 5 mph.</p>
48 hours:	<p>Minimal fire activity expected with an increase in RH. Smoldering in areas of deep duff, stumps, dead and down expected.</p> <p>Rain after 11am. High near 53. South wind 8 to 10 mph. Chance of precipitation is 90%. New precipitation amounts between a quarter and half of an inch possible. Rain showers likely before 11pm, then a slight chance of rain and snow showers.</p>
72 hours:	<p>Minimal fire activity expected, heavies continue to hold heat and consume. Re-burn potential persists.</p> <p>Mostly sunny, with a high near 49. Light and variable wind.</p>
Anticipated after 72 hours:	<p>Tuesday - A slight chance of rain after 11am. Mostly sunny, high near 56.</p> <p>Tuesday Night Rain likely, mainly after 11pm. Mostly cloudy, low around 41.</p> <p>Wednesday - Rain likely, mainly before 11am. Mostly cloudy, high near 48.</p> <p>Wednesday Night A chance of rain. Cloudy, low around 45.</p> <p>Thursday A chance of rain. Mostly cloudy, with a high near 57.</p> <p>Thursday Night A chance of rain. Mostly cloudy, with a low around 47.</p> <p>Friday Rain likely. Mostly cloudy, with a high near 58.</p>

<p>37. Strategic Objectives (define planned end-state for incident):</p> <p>Management Objectives:</p> <p>Ensure safety for firefighters and the public through hazard recognition and application of the risk management process.</p>
--

Incident Status Summary (ICS-209)

Incident: **MONUMENT**

Protect property - both public and private - including the following assets: Hwy 299 corridor, commercial timber lands, natural resource values of Trinity Alps Wilderness, designated wild and scenic rivers and inventory roadless areas.

Mitigate the spread of Covid-19, abiding by local measures, and enforcing and instituting 2020 precautions.

Integrate with cooperating agencies to protect private and public property of Junction City, Burnt Ranch, Trinity Village, Hayfork and Hyampom.

This is a full suppression incident. Roads, ridges, and other natural or manmade breaks and features will be utilized to increase holding opportunities to keep the fire as small as possible.

Operational Objectives:

Protect values of concern by ensuring fire remains in current footprint.

Provide aerial resources for initial attack within the Temporary Flight Restriction area.

Coordinate with resource advisors to minimize natural and cultural resource damage. Conduct suppression repair activities in line with the objectives identified in the Fire Suppression Repair Plan.

38. Current Incident Threat Summary and Risk Information in 12-, 24-, 48-, and 72-hour timeframes and beyond. Summarize primary incident threats to life, property, communities and community stability, residences, health care facilities, other critical infrastructure and key resources, commercial facilities, natural and environmental resources, cultural resources, and continuity of operations and/or business. Identify corresponding incident-related potential economic or cascading impacts:

Communities: Numerous communities were affected by the fire and as the fire threat continues to diminish, the main threat will be unstable slopes and hazard trees near homes and critical travel routes. Emergency suppression repair work is being done to stabilize areas that were impacted by suppression activities, but a threat of mud and debris flows from late fall and winter rains could heavily impact these areas before the work can be completed.

Commercial: Recreation industry, including river rafting, guide operations, fishing and hunting, and tourism continue to be impacted by the closures. These closures reduces the number of people visiting the area effecting tax revenue and sales at local business that count on income related to these outdoor activities.

12 hours: **Infrastructure: PG&E Transmission lines, PG&E and Trinity County PUD distribution lines, PG&E substations, domestic water sources including streams, rivers, and wells. Hazard trees and the movement of burned unstable slopes could impact the 299 which is the major East/West travel corridor to the coast. Any heavy rains could cause serious impacts to highway.**

Natural resources: Trinity Alps Wilderness.

Threatened and Endangered Species and habitat: Northern Spotted Owl, Fisher, Coho Salmon, Chinook Salmon.

Watersheds: Mainstem and East Fork North Fork Trinity River watershed with anadromous fish habitat.

Cultural: Archeologic sites including historic and pre-historic. Native American cultural, ceremonial, and botanical sites.

24 hours: **Threats will remain.**

48 hours: **All threats remain. Rain arrives heaviest totals on western flanks of the fire and diminishing to the east. This could cause movement of the unstable burned slopes and effecting travel corridors**

Incident Status Summary (ICS-209)

Incident: **MONUMENT**

<p style="text-align: center;">and infrastructure. These conditions could also make driving hazardous.</p>
<p>72 hours: This rain could be locally heavy at times.</p>
<p>Anticipated after 72 hours: All areas previously discussed will could still be impacted. Weather will be changing and a period of wetting rain is now forecast for the coming week and guidance is indicating possibility of rain and snow mix and thunderstorms along the coast.</p>
<p>39. Critical Resource Needs in 12-, 24-, 48-, and 72-hour timeframes and beyond to meet critical incident objectives. List resource category, kind, and/or type, and amount needed, in priority order:</p>
<p>12 hours: 3- Type 2 Crews, 4-TFLD, 4- HEQB, 3- Feller Bunchers, 4- FELB, 5- FMODS, 4- Skidders, 1- Type 1 grader.</p>
<p>24 hours: Remain critical.</p>
<p>48 hours: Still needed to meet incident objectives.</p>
<p>72 hours: Critical to incident.</p>
<p>Anticipated after 72 hours: Any unfilled resources remain critical to incident success.</p>
<p>40. Strategic Discussion: Explain the relation of overall strategy, constraints, and current available information to:</p> <ol style="list-style-type: none"> 1) critical resource needs identified above, 2) the Incident Action Plan and management objectives and targets, 3) anticipated results. <p>Explain major problems and concerns such as operational challenges, incident management problems, and social, political, economic, or environmental concerns or impacts.</p> <p>Ensure current level of containment is not compromised by monitoring and patrolling by air in a effort to minimize impacts to communities and values at risk. Fire continues to smolder in the Divisions I and L, although the threat continues to diminish. The current strategy being implemented is prioritized in the following order: life, structure defense/perimeter control, suppression rehab and hazard tree mitigation. The overall objective is meet strategic goals while also targeting a transfer of the incident to a local organization in the next 7 days. This is dependent on maintaining the current workforce through replacement of resources as they time out and increasing some specific resource types to meet the need of the suppression rehab standards. Approximately 51% suppression repair lines have been repaired including hazard tree mitigation and 162 miles remain.</p>
<p>41. Planned Actions for Next Operational Period:</p> <p>Keep fire within existing containment lines and monitor areas of the fire within the wilderness. Continue to determine the appropriate number, type, and kinds of resources to accomplish planned repair work. Reduce hazards along travel corridors within the fire interior. Utilize the suppression repair plan in coordination with resource advisors to implement and track suppression repair. Repair and suppression resources will backhaul excess equipment with an emphasis on accountable property. Remote areas of the fire will be monitored and patrol by air.</p>
<p>42. Projected Final Incident Size/Area (use unit label – e.g., “Acres”, “Square Miles”): 225,000</p>
<p>43. Anticipated Incident Containment or Completion Date: 11/01/2021</p>
<p>44. Projected Significant Resource Demobilization Start Date:</p>
<p>45. Estimated Incident Costs to Date: \$158,481,401.00</p>
<p>46. Projected Final Incident Cost Estimate: \$162,000,000.00</p>
<p>47. Remarks (or continuation of any blocks above – list block number in notation):</p> <p>All State Resources from states other than CA remain consolidated under the State Column Incident continues to be managed from the ICP in Redding with operational and overhead working from three camps Weaverville, Hayfork and Willow Creek. As work is completed is being completed base camps will be shutting down. The current plan is to shut down Willow Creek Camp on 10/16, Weaverville Camp 10/19 and moving all remaining resources to Hayfork Camp. Looking out at the longer term forecast there is the potential next week for the first in a series of wetting storms and high elevation snow over the</p>

Incident Status Summary (ICS-209)

Incident: **MONUMENT**

fire area starting on Sunday and increasing through the week, this series of storms could be season ending event. Heavy equipment and miscellaneous overhead remain as critical resources to complete the work.
